Introduction

Market globalisation and liberal economy concept both contributed to local economic systems suffering from the burden imposed by competition from around the world. National economic planning departments and competitiveness development policies have not succeeded to establish mechanisms to adequately respond to these challenges. This created a niche for a more significant role of local (and regional) authorities in developing conditions and solving problems caused by opening of domestic markets. Thus, local self-governments, more than ever, became involved in planning of economic development and improvement of business environment in their respective territories. With that goal, local self-governments put efforts in attracting investments, building industrial zones and parks, establishing business incubators, developing strategic and planning documents that prioritise public investments, public-private partnerships and many other instruments aimed at improving economic growth and employment on the local level.

Local economic development is a process in which local authorities and other actors in a respective territory join powers to improve the quality of life and conditions for economic growth. Therefore, when talking about local economic development, it mostly involves a participatory model of cooperation between socio-economic actors in respective localities. Vertical coordination between different levels of authority and harmonisation of public policies are also important factors for successful planning and implementation of local economic development.

This definition should be clearly separated from considering local economic development as an outcome of an intervention, measured by economic indicators (e.g. GDP growth, unemployment rate, number of new enterprises, etc.), primarily because the concept of local economic development is not strictly based on economic growth but primarily related to activities aimed at improving the quality of life and improvement of business environment.

Overview of donor projects in the field of local economic development

Local economic development in Serbia was initiated by international development agencies which presented the concept through a range of projects and initiatives that contributed to raising awareness among actors on both local and national level. First projects were initiated right after democratic changes and they were focused on revitalisation of local communities, thus, as such, they did not have a strong development character. However, in the middle of the first decade of the new millennium, the development projects were initiated as well, funded from EU funds and bilateral donors such as USAID, SDC, Sida, ADA, Government of the Kingdom of Norway, the Kingdom of Denmark and others.

1 Dragiša Mijačić is a director of the Institute for Territorial Economic Development (InTER). Please send your comments to dmijacic@lokalnirazvoj.org.
According to the geography, the projects that have had a direct or indirect impact on local economic development can be divided into:

- national,
- geographically dispersed, or implemented in municipalities that are not territorially connected, and
- geographically concentrated, or implemented in municipalities that are territorially connected.

The first category comprises EU projects: Exchange (all three phases), MSP IPA 2007, MISP (all phases) and RSEDP2. These projects have directly or indirectly dealt with issues of importance for local economic development in the whole territory of the Republic of Serbia.

Geographically dispersed projects include USAID MEGA, that was implemented in 32 local self-governments throughout Serbia, as well as the first stage of the Municipal Support Programme, financed by the Swiss Government, implemented in 7 municipalities and cities of Central Serbia.

Nevertheless, most projects dealing with local economic development had a clear territorial focus, mostly covering poor municipalities in Southwest, South and East Serbia. Unlike the first two categories, this one includes multi-donor initiatives, such as MIR, PRO, EU Progres and PBILD, which represent the most significant projects in local self-governments in Southwest and South Serbia.

Some of the EU projects in this category also include the first phase of the Regional Socio-Economic Development Programme and the Municipal Support Programme North-East Serbia (MSP NE). As special cases, Cross-Border Cooperation Programmes can also be considered as programmes supporting local economic development with a clear territorial focus on border territories of the Republic of Serbia.

Apart from support to multi-donor initiatives, the Swiss Government (through its development agency ADA) has been financing two separate projects that belong to this category. The first one is Municipal Support Programme - MSP (second and third stage) that was implemented in six municipalities of Central and West Serbia. The other two initiatives are the Private Sector Development in Southwest Serbia, that was focused on 6 municipalities of Zlatibor District and the Private Sector Development in South Serbia, implemented in 6 municipalities of Pčinja and Jablanica District.

As in case of Switzerland, the Government of the Republic of Austria participated through its development agency ADA in multi-donor programmes, but also separately financed projects relevant for local development with a clear territorial focus. The first such project is the Integrated Regional Development Plan of the Autonomous Province of Vojvodina that was implemented at the provincial level, but affected the local development of municipalities in Vojvodina. The second project is the Programme of Support to Sustainable Regional Development of Jablanica and Pčinja Districts that was implemented in the south of Serbia.

German humanitarian organisation HELP is also active in Serbia.

6 Even though CRDA and CRDA-E were implemented in the whole territory of Serbia, the modality of their implementation through partner organisations that covered clearly defined territories places these two programmes in the category of geographically concentrated projects.

7 Geographical areas where USAID SLDP is active can be found on the webpage http://www.lokalnirazvoj.rs/gde-radimo.html

8 Arilje, Čajetina, Čačak, Kraljevo, Požega and Užice

9 Arilje, Nova Varoš, Prijboj, Prijeponje, Čajetina and Užice. This programme is implemented by RDA Zlatibor from Užice

10 Preševo, Bujanovac, Surdulica, Trgovište, Vranje and Leskovac. This programme is implemented by VEEDA from Vranje. The project started in 2011 and it will last until 2014.

11 Golubac, Zaječar, Sokobanja, Majdanpek, Veliko Gradište, Kladovo, Negotin, Knjaževac, Boljevac and Bor
in the implementation of projects supporting entre-
preneurship development and poverty reduction by
supporting vulnerable population groups, refugees
and IDPs, and others. Between 2002 and 2012, HELP
provided support for 4,491 beneficiaries who were
provided equipment and business trainings and coun-
selling. HELP’s activities are geographically concen-
trated in relation to their four offices, in Belgrade, Niš,
Kraljevo and Bujanovac.

Finally, there is also the Local Economic Development
in the Balkans programme, funded by the Government
of the Kingdom of Denmark, and implemented in mu-
nicipalities of Nišavski District.

There are also several smaller projects financed by dif-
ferent foundations, such as the Fund for an Open So-
ciety, Balkan Trust for Democracy and many others.
However, all these projects are small in size, and not
necessary to be treated separately in this paper.

Types of interventions in the field of local eco-
nomic development

Local economic development projects were mostly
covering the following four intervention areas:

• preparation of strategic and action plans for local
development,
• capacity building for project proposal writing and im-
plementation,
• development of local social and communal infra-
structure, and
• establishing local economic development offices.

Almost all projects focused on local economic devel-
opment have supported the preparation of strat-
egic and action planning documentation on the local
level. As a result of these interventions, in 2012, the
Standing Conference of Towns and Municipalities
registered 708 strategic and action plans prepared
or being prepared by municipalities and cities. This
can lead to a conclusion that the first cycle of stra-
tegic planning in Serbia has been finished in a large
majority of municipalities and cities. Also, there are
a number of local self-governments that have initi-
ated a new cycle of designing strategic and action
plans.

Main problems in strategic planning include the
lack of properly elaborated action plans and financial
mechanisms for their implementation. Therefore, a significant number of strategic plans remain
to be wish lists, often unrealistic. Solution for these
problems is expected in the introduction of the pro-
grammed budgeting system on the local level.12

Also, in many municipalities and cities there is an
obstacle for implementation of strategic plans in the
lack of political will and a general consensus on de-
velopment priorities and goals. In a number of mu-
nicipalities, there is also a big problem in systematic
monitoring of strategy implementation based on

Poor local communal infrastructure is typical for
all local self-government units in Serbia. Hoping to
solve the accumulated problems, local governments
are actively engaged in searching external funds.
Therefore, for most local self-governments in Serbia,
investments in social and communal infrastructure
are the most attractive part of participation in pro-
jects.

Developing communal infrastructure and recon-
structing buildings of social importance (schools,
hospitals, cultural centres, etc.) are important parts
of all projects focused in local economic develop-

city. Therefore, a new practice in the creation and execution of local
budgets – programmed budgets.

12 In accordance with the Law on Budgetary System,
starting with 2015, local self-governments in Serbia have to
initiate a new practice in the creation and execution of local budgets – programmed budgets.
A decade of local economic development in Serbia: lessons for the future?

They can be split into projects dealing exclusively with the development of local infrastructure (e.g. MISP and its preceded projects) and projects supporting infrastructure development within a component or through calls for proposals for grants (e.g. MIR, PRO, EU Progres, Cross-Border Cooperation Programmes, etc.).

Establishing local economic development offices and developing their capacities are also a frequent focus of local development project interventions. The project that stands out by scope of support to this area is USAID MEGA that supported the establishment of 32 local economic development offices in self-governments throughout Serbia, but other projects as well, such as RSEDP, MIR, PRO, PBILD, LEDIB, MSP SDC and many others. Technical support for establishment of offices was also provided by regional development agencies Zlatibor, REDASP, RARIS, Centre for Development Banat and Bačka.

According to the results of the latest research carried out by InTER in 2012, out of 144 self-government units in Serbia (not including Belgrade), 121 have some form of local economic development office. Capacities of those offices vary in different self-government units, with a visible disparity between cities and municipalities. Also, in cities and municipalities with strong capacities within local economic development offices, political influence on their work is much weaker than in those with weak capacities. Another problem shared by local economic development offices is the lack of standardised set of services that should be provided by these units. Namely, local economic development offices mostly work on preparation and implementation of projects and local development planning, whereas other activities are carried out to a much smaller extent.

Conclusion: what next in local economic development?

Today, ten years after the first projects implemented in local development, the question is what future project interventions should focus on. The economic environment in Serbia is characterised by inadequate economic legislation, high unemployment, uncompetitive local economy and a high degree of corruption in public procurement on all levels. Even though they have been constrained with the legal framework, local self-governments should be proactive, maximising their potentials and moving the limits of their actions in areas relevant for local development. Also, it is necessary to advance cooperation with the business sector by introducing mechanisms for continuous consultations and cooperation. Capacity building for public and private partnerships will be one of the biggest challenges in the upcoming period. In addition, it should be kept in mind that democracy includes pluralism and consensus, and it is of great importance to include both private and civil sector in making important decisions for local development.

Promotion of entrepreneurship is also an important field of intervention. Entrepreneurship based on economy of knowledge and modern technologies, as well as on industries generating added value and job creation needs to be promoted and encouraged. In this sense, it is necessary to work on development of entrepreneurial skills, especially among qualified professionals who want to start their own business, as well youth, women and the unemployed.

Integrated development of business support infrastructure at the local and regional level should also have a significant place in future local development interventions. Elements of business support infrastructure, clusters, business incubators and industrial zones and parks have mostly developed independently of each other, and often in disharmony with local economic systems and development policies. In order to achieve as efficient local development as possible, these elements need to be linked to serve for a unique vision and strategic orientation of local economic systems. It is also necessary to work more actively on the revitalisation of Brownfield locations in order to put them in operation to serve the economic development.

Attracting local and foreign direct investments is also an area where a more active role of local self-governments is needed. Many municipalities and towns prepared promotional materials and they actively participate in investment fairs in the country and abroad. However, it is necessary to work more actively with potential investors (both national and foreign) and the national government in order to solve problems that follow every investment: from obtaining different permits from national and local institutions to finding high quality workforce, building the necessary infrastructure,
etc. Establishing a unique one-stop shop system that would work within LED offices could be the first step towards a more active approach to supporting foreign investors on the local level.

Capacity building of local self-governments and LED offices is also a significant field of intervention in the following years. It is especially necessary to strengthen human potentials to develop local development policies based on quality analyses. Collecting and analysing statistical data on the local level is also a necessity which can considerably contribute to better local development planning in Serbia.

There is no city or municipality that can solve development problems on their own. Thus it is necessary for them to work more on implementation of regional development policies and strengthening inter-municipal cooperation. However, majority of local self-governments in Serbia develop their own development policies without analysing their immediate territorial environment. In many cases, there are animosities between neighbouring municipalities, based on political, historical, cultural or ethnic grounds. However, there are evidences showing that the level of inter-municipal and regional cooperation is in a clear correlation with the number of geographically concentrated project interventions in a specific territory. This means that the level of inter-municipal cooperation is significantly higher in areas with stronger presence of donor projects. Inter-municipal cooperation is also stronger in areas with active regional development agencies. This shows the importance of initiating and implementing projects of joint interest for local self-governments on the district or regional level, as well as strengthening cooperation between local self-government units and regional development agencies.

At the national level it is necessary to work on improving legislation that affects the development and implementation of local economic development policies. A set of indicators that would follow the level of development of local self-governments in Serbia in a comparative way should also be developed.

Finally, it is important to mention that it is necessary to work on the promotion of lessons learned and good practice examples from previous work in the field of local economic development. With that regard, it is necessary to conduct a comprehensive impact assessment of implemented projects on sustainable local economic development in Serbia, which would adequately answer which types of interventions helped the most in building human and operational capacities, as well as economic empowerment on the local level.

*RS - Government of the Republic of Serbia

This paper argues for the necessity of a comprehensive impact assessment of EU financial assistance to Serbia to-date, with the parallel goal of designing better instruments for measuring impact, and thereby contributing to improved policy design for the country’s socio-economic development and future EU accession. The paper explores the scale of EU assistance in Serbia, giving an overview of the history of EU development cooperation over the time period 2000-2012, before going on to provide an analysis of the tools currently used for assessing impacts of the Instrument for Pre-accession Assistance (IPA). The paper ends with conclusions and policy recommendations for including impact assessment as an integral element of all EU-assisted operations.
